

Certification Guide

Overall Program Description

The CrowdStrike Falcon Certification Program (CFCP) is a role-based certification program covering different types of CrowdStrike Falcon® users:

- **Falcon Administrators**
- **Falcon Responders** (or front-line SOC analysts)
- **Falcon Hunters** (or forensic investigators)
- **Identity Specialists**
- **Cloud Specialists**

To offer these certifications, CrowdStrike draws on a talent pool of our own seasoned subject matter experts who use the Falcon platform daily in their specific roles. This ensures that users who hold one of these certifications have demonstrated thorough knowledge of the respective areas, and their managers can trust that they can effectively and proficiently use CrowdStrike products and workflows in their day-to-day activities.

Each certification level recommends that the candidate attend the course(s) listed in the **recommended learning path** for each certification. Although there is no requirement for how recently they have completed the recommended learning, candidates are encouraged to stay current on features, as the certification is subject to update at any time. Each level of certification also assumes a working knowledge of the tool for that level and familiarity with the product guides listed in the recommended learning path.

Last Updated: March 20, 2024

CrowdStrike Falcon Certifications

CrowdStrike Certified Falcon Administrator (CCFA)

CrowdStrike Certified Falcon Responder (CCFR)

CrowdStrike Certified Falcon Hunter (CCFH)

CrowdStrike Certified Identity Specialist (CCIS)

CrowdStrike Certified Cloud Specialist (CCCS)

CrowdStrike Certified Falcon Administrator (CCFA)

The CCFA certification is directed at administrators or any analyst with access to the administrative side of the Falcon platform. Examples of positions aligning with this certification are security analysts, security operations center (SOC) analysts, security engineers, IT security operations managers, security administrators, Falcon administrators and endpoint security administrators.

Persons holding this certification have demonstrated sufficient knowledge to effectively manage the Falcon instance. Specific duties might include user management and role-based permissions, sensor deployment and management, group creation, deployment and prevention policy settings, allowlisting and blocklisting, file path exclusion, administrative reporting and more.

This examination has 60 questions and is a closed-book exam. Candidates are allowed 90 minutes to complete this examination. Candidates who are unsuccessful will receive a second opportunity to complete the examination and should wait 24 hours before the second attempt.

Recommended Learning Path: The recommended learning path for the CCFA certification includes the [CSU LP-A: Falcon Administrator Courses](#) in CrowdStrike University.

Candidates should be familiar with the following guides, which are available via the Falcon console by accessing Support > Documentation:

- Falcon Orientation Guides
- Falcon Sensor Deployment and Maintenance Guides
- Endpoint Security Guides
- User Management Guides
- SIEM Connector Guide

In addition to the above learning path, CrowdStrike suggests that candidates for this certification have at least six months of experience with the CrowdStrike Falcon platform in a production environment.

Tests are administered online through Pearson VUE.

It is highly recommended that each participant has a valid subscription to CrowdStrike University.

The cost for each exam is \$250, and the voucher can be purchased through your CrowdStrike sales representative or online at Pearson VUE.

Each exam is timed, and candidates will have two opportunities to complete the exam successfully. The passing score for the exam is 80%.

Upon successful completion of the exam, the candidate will receive a score report from Pearson VUE. Certifications are valid for a period of three years.

Once you pass a PearsonVUE administered exam, you will receive an email with instructions on how to get your digital credentials powered by Credly to share on your social media profiles and how you can download printable certificates for your records.

Questions regarding Falcon certification can be sent to certification@crowdstrike.com

CrowdStrike Certified Falcon Responder (CCFR)

The CCFR certification is directed at front-line analysts responding to detections or anyone performing these duties. Examples of positions aligning with this certification are security analysts, SOC analysts, security engineers, IT security operations managers, security administrators and endpoint security administrators.

Persons holding this certification have demonstrated sufficient knowledge to effectively respond to a detection within the Falcon interface and Activity app. Specific duties might include initial triage of a detection, filtering, grouping, assignment, commenting and status changes. They can conduct basic investigations by performing tasks such as host search, host timeline, process timeline, user search and other click-driven workflows. In addition, they can perform basic proactive hunting for atomic indicators such as domain names, IP addresses and hash values across enterprise event data, whether the indicator is related to an internal alert or to external intelligence.

This examination has 60 questions and is a closed-book exam. Candidates are allowed 90 minutes to complete this examination. Candidates who are unsuccessful will receive a second opportunity to complete the examination and should wait 24 hours before the second attempt.

Recommended Learning Path: The recommended learning path for the CCFR certification includes the [CSU LP-R: Incident Responder Courses](#). Completion of FHT 100-level courses in CrowdStrike University is highly recommended. The CCFA certificate is not required; however, it is commonly obtained first, especially for those who perform multiple functions.

Candidates should be familiar with the following guides, which are available via the Falcon console by accessing Support > Documentation:

- Falcon Orientation Guides
- Endpoint Security Guides
- User Management Guides
- Streaming API Event Dictionary (Review Detection Types)

In addition to the above learning path, CrowdStrike suggests that candidates for this certification have at least six months of experience with the CrowdStrike Falcon platform in a production environment.

CrowdStrike Certified Falcon Hunter (CCFH)

The CCFH certification is directed at investigative analysts who performs deeper detection, analysis, and response as well as machine timelining and event-related search queries. These analysts are also frequently responsible for insider threat-related investigations and proactive investigations (hunting) based on intelligence reports and other sources of information. Examples of positions aligning with this certification are hunting team members, security analysts, SOC analysts, security engineers, IT security operations managers, security administrators and endpoint security administrators.

Persons holding this certification have demonstrated sufficient knowledge to effectively respond to a detection within the Falcon interface and Activity app. They understand which automated reports and queries exist and how to use them to assist in machine auditing and proactive investigation. They have demonstrated the ability to perform simple and intermediate-level search queries using the Splunk syntax. They understand how to navigate between and use multiple views in the Falcon interface — such as process explorer, host search, host timeline and process timeline — to maximize productivity and quickly obtain the desired results.

This examination has 60 questions and is a closed-book exam. Candidates are allowed 90 minutes to complete this examination. Candidates who are unsuccessful will receive a second opportunity to complete the examination and should wait 24 hours before the second attempt.

Recommended Learning Path: The recommended learning path for the CCFH certification includes the [CSU LP-H: Threat Hunter Courses](#). Completion of FHT 100-level courses in CrowdStrike University and the FHT 302 instructor-led course is highly recommended. The CCFA and CCFR certificates are not required, but they may be obtained first, especially for those who perform multiple functions.

Candidates should be familiar with the following guides, which are available via the Falcon console by accessing Support > Documentation:

- Falcon Orientation Guides
- Endpoint Security Guides
- User Management Guides
- Streaming API Event Dictionary (Review detection types)
- Events Data Dictionary
- Hunting and Investigation Guide

In addition to the above learning path, CrowdStrike suggests that candidates for this certification have at least six months of experience with the CrowdStrike Falcon platform in a production environment.

CrowdStrike Certified Identity Specialist (CCIS)

The CCIS certification is directed at those working in identity and access management (IAM), analysts focusing on identity-based threats, and policy and access administrators. Examples of positions aligning with this certification are identity managers, analysts, threat hunters and investigators, and Falcon administrators.

The CCIS exam evaluates a candidate's knowledge, skills and abilities to manage domain security with identity-based solutions, administer policy rules and actions, automate responses to identity threats, and manage risk across the authentication landscape in the domain.

A successful CCIS candidate manages identity-based risk in the domain, assesses user and entity risks, investigates identity-based incidents and detections, manages third-party MFA and IDAAS connectors, implements and tunes policies to manage identity-based risks, and maintains the overall identity-based security posture in the domain.

This examination has 60 questions and is a closed-book exam. Candidates are allowed 90 minutes to complete this examination. Candidates who are unsuccessful will receive a second opportunity to complete the examination and should wait 24 hours before the second attempt.

Recommended Learning Path: The recommended learning path for the CCIS certification includes the [CSU LP-IP: Identity Specialist Courses](#).

Candidates should be familiar with the following guides, which are available via the Falcon console by accessing Support > Documentation:

- Identity Protection Overview
- Identity-Based Incidents, Detections, and Risks
- Identity Protection Reports
- Identity Protection System Notifications
- Identity Protection Insights
- Identity Protection Threat Hunter
- Identity Protection Administration
- Identity Protection Policy
- Identity Protection in Falcon Fusion Workflows
- Integrating Identity Protection with AD FS
- Integrating Identity Protection with PingFederate
- Identity Protection APIs
- Zero Trust Assessment

In addition to the above learning path, CrowdStrike suggests that candidates for this certification have at least six months of experience with the CrowdStrike Falcon platform in a production environment.

CrowdStrike Certified

Cloud Specialist (CCCS)

The CCCS certification is directed at cloud security engineers who manage the security of their organization's cloud infrastructure. These engineers review the assets, workloads and containers within a cloud environment to see if there are any risky configurations or behaviors that could lead to a breach, and recommend remediations to fix those vulnerabilities. Examples of positions aligning with this certification are cloud security analysts, cloud security engineers, cloud security administrators and cloud security architects.

Persons holding this certification have demonstrated sufficient knowledge to effectively find security gaps in an organization's cloud infrastructure that can be exploited by an adversary. Specific duties might include managing cloud users and role-based permissions; container sensor deployment and management; investigating a finding for a cloud asset, image or container; determining compliance with industry standards; and recommending remediations to fix vulnerabilities.

This examination has 60 questions and is a closed-book exam. Candidates are allowed 90 minutes to complete this examination. Candidates who are unsuccessful will receive a second opportunity to complete the examination and should wait 24 hours before the second attempt.

Recommended Learning Path: The recommended learning path for the CCCS certification includes the [CSU LP-C: Falcon Cloud Security Courses](#). Completion of FHT 100-level courses in CrowdStrike University, and the CLOUD 223 and CLOUD 271 instructor-led courses are highly recommended. The CCFA and CCFR certificates are not required, but they may be obtained first, especially for those who perform multiple functions.

Candidates should be familiar with the following guides, which are available via the Falcon console by accessing Support > Documentation:

- Cloud Security Overview
- Cloud Security Posture Management: Cloud Asset Inventory and Visualization
- Cloud Security Posture Management: CSPM Automated Remediation
- Cloud Security Posture Management: Configuring CSPM
- Cloud Security Posture Management: Identity Analyzer
- Cloud Security Posture Management: CSPM Overview
- Cloud Security Posture Management: Monitoring CSPM Assessment Findings
- Cloud Security Posture Management: Troubleshooting Cloud Security Posture Management
- Registering Accounts
- Kubernetes and Containers: Container Security
- Kubernetes and Containers: Kubernetes Protection

In addition to the above learning path, CrowdStrike suggests that candidates for this certification have at least six months of experience with the CrowdStrike Falcon platform in a production environment.

ABOUT CROWDSTRIKE SERVICES

CrowdStrike Services equips organizations with the protection and expertise they need to defend against and respond to security incidents. By leveraging the cloud-delivered CrowdStrike Falcon platform — including next-generation endpoint protection, cyber threat intelligence gathering and reporting operations, and a 24/7 proactive threat hunting team — the CrowdStrike Services team helps customers identify, track and block attackers in real time. This unique approach allows CrowdStrike to stop unauthorized access faster and prevent further breaches. CrowdStrike also offers proactive services so organizations can improve their ability to anticipate threats, prepare their networks and ultimately stop breaches.
