EXAMINING
THE DIFFERENCE:

DON'T SETTLE

WHEN IT COMES TO ENDPOINT SECURITY

Endpoint security is one of the most critical components of a cybersecurity strategy. Unfortunately, it has never been more challenging to select the best solution for the job. With so many options on the market and features that sound identical, choosing a solution is anything but straightforward.

MAKE SURE YOUR SECURITY PROVIDER HAS
FLEXIBLE ARCHITECTURE FOR THE DIGITAL WORLD

CROWDSTRIKE	VS	OTHER VENDORS

TRUE CLOUD-NATIVE | Designed for the cloud-native, work from anywhere world.

STILL LEARNING | On-premises, legacy architecture design that is deployed to a cloud, with inadequate scaling for enterprise use.

NIMBLE | Lightweight agent that avoids the performance overhead historically associated with endpoint protection agents.

OVERWEIGHT | Endpoint agent that has high memory consumption and high disk utilization to the tune of GBs on disk.

AGILE | We enable customers to deploy tens of thousands of agents at once, with no reboots necessary to install or change security settings.

CLUNKY | Technology requires a reboot to install, needs subsequent reboots when changes are made, and needs custom builds to reduce their false positive problems.

NEXT-GEN | CrowdStrikes Security Cloud delivers enterprise security for what is most critical for the next digital wave – endpoints and cloud workloads, identity, and data.

**LAST-GEN** | Can't adequately perform basic current-gen endpoint capabilities because of legacy constraints.

TIME TO MAKE A CHANGE?

Download the "*The five essential capabilities of cloud-based endpoint protection*" and get started today.

USE THE BUYERS GUIDE TO EVALUATE EACH OF THE FIVE ESSENTIAL CAPABILITIES OF CLOUD-BASED ENDPOINT PROTECTION.

This guide was designed to help organizations get the information they need to measure and compare different solutions.

It examines the following for each key use case:

REQUIRED FEATURES ---> EVALUATION CRITERIA ---> QUESTIONS TO ASK
