Cyber Resilience
Unify security and IT to accelerate threat and vulnerability prioritization, response and remediation.

The ever-evolving threat landscape continues to be a challenge across every industry. Organizations are finding they do not have enough resources to keep up with threats, or the visibility and context needed into threats and vulnerable applications to prioritize incidents fast enough. As the number of targeted attacks continues to rise, security teams have become overwhelmed with alerts and struggle to combine data from disparate sources to prioritize incident response efforts.
71%
Of security professionals say integration complexity with other technology and security stacks require improvement

76%
plan to recruit more IT security professionals over the next 12 months
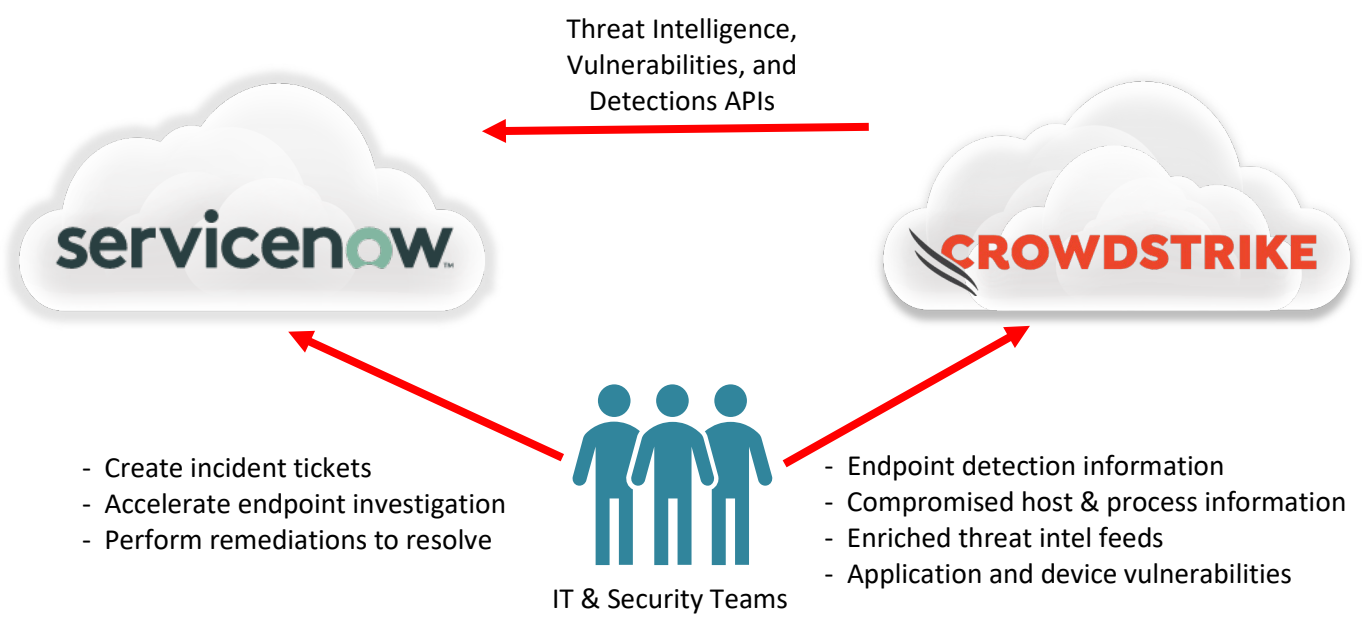

82%
admit that their organizations' IT security would be more effective if all of their IT and security solutions shared the same aggregated pool of data

80%
agree that alert fatigue is an issue with their organization

ServiceNow and CrowdStrike Integration

Threat Intelligence, Vulnerabilities, and Detections APIs

servicenow

CROWDSTRIKE

- Create incident tickets
- Accelerate endpoint investigation
- Perform remediations to resolve

IT & Security Teams

- Endpoint detection information
- Compromised host & process information
- Enriched threat intel feeds
- Application and device vulnerabilities

How we solve this better, together

The CrowdStrike and ServiceNow integration provides joint customers with streamlined security operations and accelerated identification, prioritization and remediation of threats and vulnerabilities. This enables security teams to quickly perform remediation tasks before an incident can impact their business.

Accelerate Incident and Vulnerability Response with the CrowdStrike Integration in the ServiceNow Store
